CHANGJON PORT COMPLEX

This report on the Changjon port complex is one of a continuing series on North Korean port and naval installations. Changjon is also known as Kosong. Changjon is a minor fishing port near the southeastern corner of the country. Located within the port complex are a small naval base and 2 small boatyards, both of which could perform out-of-the-water repairs on PT-size vessels under emergency conditions.

Wharves along the northeast and north sides of the harbor have depths of [REDACTED] alongside.

Project 11016AC/6

In the SE corner of North Korea and facing Changjon-man.

This facility is primarily intended to serve the fishing industry. The lack of deep water berthing, handling facilities, and adequate hinterland access indicates that this port is at present not considered a seaport. Few, if any, ocean-going cargo vessels have been observed at this installation.

Facilities include 1 quay (shared jointly with the naval base) and 6 small finger piers. A probable fish processing factory with 2 three-bay buildings and several support buildings is located adjacent to the port facility quay.

On the north side of the port facilities.

This installation is the southernmost NKN East Sea Fleet naval base. Lacking significant repair and support facilities, this base apparently is capable of sustained support of P-6/P-2 PT and limited support of larger units. Normal OB includes T-MSF, S.O.-1 SC and P-2 PT.

Facilities include 3 quays, 1 small marine railway, 1 probable maintenance support buildings, 4 probable small barracks, 5 administration/ support buildings, and several small support buildings.
